# Mac Daddy's Pet Grooming Salon Website Planning Questionnaire

## Who is the target audience?

The target audience is local pet owners who are looking for trustworthy and welcoming grooming salon. This includes both dog and cat owners who want reliable care for their pets. A key focus is on owners of bully breeds (such as Pitbull's and American Staffordshire Terriers), who often look for businesses that are clearly non-judgmental and experienced with their dogs. As an AmStaff owner myself, I understand how important it is to feel confident that your pet will be treated well regardless of breed. This site aims to make that inclusivity clear from the start, while also emphasizing that grooming services are available for both dogs and cats.

## How can I tailor the website to reach that audience?

The website can be tailored to this audience by emphasizing a welcoming, friendly, and inclusive tone throughout the design and content. This includes:

- *Featuring my dog that recently passed, Mac (an AmStaff), prominently to visually communicate that bully breeds are not only welcomed but very loved*
- *Using warm colors and approachable design elements to build trust*
- *Clearly stating that all dog breeds and cats are accepted and cared for*
- *Including photos of both dogs and cats to reflect a wider range of clients*
- *Providing easy access to important information like services, pricing, and scheduling*

The goal is to make visitors feel comfortable, confident, and assured that their pets, regardless of breed or species, will be well cared for.

## What are the goals for the site?

The primary goal of the site is to provide users with quick and easy access to essential information when choosing a pet groomer. This includes:

- *Information about the business and its values*
- *Services offered for both dogs and cats*
- *Pricing for grooming packages*
- *Business hours and contact information*
- *An easy way to schedule appointments online*

A secondary goal is to build trust with potential customers by sharing the story behind the business and its inspiration, our beloved Mac dog.

## How will I gather the information?

Information will be gathered through a combination of research and personal resources, including:

- *Reviewing other pet grooming websites to understand common pricing structures and services for both dogs and cats*
- *Using a dog breed grooming reference book to ensure accurate grooming descriptions*
- *Research common cat grooming services and standards*
- *Consulting with my wife, who is the inspiration behind the business idea*
- *Using AI tools for brainstorming and refining content where appropriate*

## What are my sources for multimedia content?

Multimedia content will come from a mix of original and external sources, including:

- *Personal photos of Mac to add authenticity and emotional connection*
- *Stock images of both dog and cat grooming and different haircut styles*
- *AI-generated images if needed for specific grooming styles or concepts*

All images will be optimized for web use to ensure fast loading times and good performance.

## What is my budget? How long do I have to complete the project?

Since this is a school project, there is no financial budget. However, time is the primary constraint. The project must be completed within five weeks while balancing other coursework. Because of this, the scope of the project will remain realistic and focused on core features rather than advanced functionality.

## Who is on my project team?

The project will primarily be completed independently. However, feedback and support will come from:

- *The course instructor, Mr. Wallace, for guidance and evaluation*
- *My wife, Paige, for business insight and design inspiration*

## How often should the site be updated?

The site should be updated periodically to ensure accuracy, specifically for:

- *Pricing changes*
- *Services offered for both dogs and cats*
- *Business Hours*

A reasonable update schedule would be every 6-12 months, or as needed when changes occur.

## Who is responsible for updating the site?

The business owner would be responsible for maintaining and updating the site to ensure that all information remains current and accurate.
